

# Kayla Gilbert

QA Engineer · Test Automation & Framework Development

Bentonville, AR · Remote · [kayla@snackdriven.com](mailto:kayla@snackdriven.com) · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

## SUMMARY

QA engineer who builds test automation for environments where standard tooling doesn't work. Currently sole QA on 8 behavioral health SaaS products, including a no-code platform with no staging and runtime-generated DOM. Built a config-driven Playwright framework with LLM-assisted selector resolution, plus 14 internal tools to handle a doubled release cadence.

## TECHNICAL SKILLS

Testing: Playwright, Selenium, Cypress, Postman, GraphQL validation, regression design

Languages: TypeScript, Python, SQL, Node.js

AI: Claude API + Code, Gemini (video triage)

Frontend: React, Tailwind, Storybook

Tools: Jira, Confluence, Git, CI/CD, TestRail

Domain: Behavioral health SaaS, HIPAA, no-code platforms, 988 crisis dispatch, Medi-Cal

## EXPERIENCE

**Senior QA Specialist** · Chorus Innovations · promoted from QA Specialist Sep 2024 – Present

- Built a config-driven Playwright test harness for 350+ runtime-generated form fields on a no-code platform with no staging. Config files hold field mappings so I update those instead of rewriting tests. A Claude API layer handles fuzzy label matching when platform changes break selectors.
- 14 automation scripts: video capture for audit evidence, Jira release summaries from ticket metadata, daily QA digests, 63-section form autofill. Documentation overhead went from ~4 hrs/wk to under 1.
- Only QA on 8 products. Two release boards, 2x/week cadence.
- Release readiness system with gate checklists, regression grouped by data mutation type, risk-tiered LOE model for scoping.
- ~230 releases across both boards over 2.5 years with HIPAA-compliant evidence trails.

**Software QA Specialist** · Chorus Innovations Apr 2023 – Sep 2024

- Ran regression and smoke testing across dev, staging, and prod on the newer React/GraphQL/Terraform stack. Also tested the legacy no-code platform straight to production.
- Second release board spun up and I took it on solo. Started writing early QA tooling that became the full automation toolkit after promotion.

**Software Quality Engineer II** · Ultronauts · promoted from QA Engineer I Oct 2021 – Feb 2023

- QA on client projects, including multi-role workflows and data flowing between systems. Took on bigger engagements over time, promoted based on delivery.

**Software QA Engineer I** · Ultronauts · started part-time as QA Tester Feb 2020 – Sep 2021

- Started part-time, went full-time within 8 months. Manual and exploratory testing across multiple client products. Wrote regression suites and test docs.

**Virtual Assistant** · Self-employed Mar 2019 – Jan 2020

**Assistant General Manager** · Sonic Drive-In · 5 years Jan 2014 – Dec 2018

## PROJECTS

**jira-local** · [github.com/snackdriven/jira-local](https://github.com/snackdriven/jira-local)

- Local Jira client (React 18, TypeScript strict, Vite, TanStack Query) with 5 view modes, rate-limited API calls, local caching. AI-assisted build (Claude Code). MIT licensed, public repo.
